DETAILED ACTION

Double Patenting

A rejection based on double patenting of the "same invention" type finds its support in the language of 35 U.S.C. 101 which states that "whoever invents or discovers any new and useful process ... may obtain a patent therefor..." (Emphasis added). Thus, the term "same invention," in this context, means an invention drawn to identical subject matter. See *Miller v. Eagle Mfg. Co.*, 151 U.S. 186 (1894); *In re Ockert*, 245 F.2d 467, 114 USPQ 330 (CCPA 1957); and *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970).

A statutory type (35 U.S.C. 101) double patenting rejection can be overcome by canceling or amending the conflicting claims so they are no longer coextensive in scope. The filing of a terminal disclaimer cannot overcome a double patenting rejection based upon 35 U.S.C. 101.

1. Claim 1 is rejected under 35 U.S.C. 101 as claiming the same invention as that of claims 1 of prior U.S. Patent No. 6,624,455. This is a double patenting rejection.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claim 1 is rejected under 35 U. S. C. 102(b) as being anticipated by Richart et al. (US Pat. 5,427,963, herein after Richart).

Regarding claim 1, Richart discloses in figs. 16-18 a semiconductor device having a plurality of MOSFETs where a source region 64/66, a drain region 64/66 (N-type) (col. 7, lines 3-5& 22-24) and a channel forming region are formed in a semiconductor P-type substrate 48 (col. 6, line 1-2), respectively, wherein impurity regions 42 (P-type) of a conductive type opposite to that of source region 64/66 and drain region 64/66 (col. 6, lines 12-14) are disposed locally in a channel width direction on a junction portion of drain region within channel forming region.
